Dear Customer,

Thank you for trusting our products and our family-owned company, the leading technology supplier of robots and production machines.

Our team is always available to answer any questions on this product and other solutions. Ask us questions and challenge us. We will find a solution!

Best regards,

Your SCHUNK team

Customer Management

1 General

1.1 About this manual

This manual contains important information for a safe and appropriate use of the product.

This manual is an integral part of the product and must be kept accessible for the personnel at all times.

Before starting work, the personnel must have read and understood this operating manual. Prerequisite for safe working is the observance of all safety instructions in this manual.

In addition to these instructions, the documents listed under ▶ 1.1.4 [6] are applicable.

NOTE: The illustrations in this manual are intended to provide a basic understanding and may deviate from the actual version.

1.1.1 Presentation of Warning Labels

To make risks clear, the following signal words and symbols are used for safety notes.

⚠ DANGER

Dangers for persons!

Non-observance will inevitably cause irreversible injury or death.

⚠ WARNING

Dangers for persons!

Non-observance can lead to irreversible injury and even death.

⚠ CAUTION

Dangers for persons!

Non-observance can cause minor injuries.

NOTICE

Material damage!

Information about avoiding material damage.

1.1.2 Definition of Terms

The term "product" replaces the product name on the title page in this manual.

1.1.3 Symbol definition

The following symbols are used in this manual:

■ Prerequisite for an action

1. Action 1

2. Action 2

⇒ Intermediate results

⇒ Final results

▶ 1.1.3 [📄 6]: chapter number and [page number] in hyperlinks

1.1.4 Applicable documents

- General terms of business *
- Assembly and Operating Manual for the SCHUNK Tool Changer *
- Catalog data sheet of the purchased product *

The documents labeled with an asterisk (*) can be downloaded from [schunk.com/downloads](https://www.schunk.com/downloads).

1.1.5 Sizes

This operating manual applies to the following sizes:

- COS SA2-K
- COS SA2-A
- COS SA3-A

1.2 Warranty

If the product is used as intended, the warranty is valid for 24 months from the ex-works delivery date under the following conditions:

- Observe the specified maintenance and lubrication intervals
- Observe the ambient conditions and operating conditions

Parts touching the workpiece and wear parts are not included in the warranty.

1.3 Scope of delivery

The scope of delivery includes

- Optional module COS SA in the size ordered
- Safety information (product-specific instructions available online)
- Accessory pack
 - Ident number: 1593912
 - Contents: Fastening screws and cylindrical pins

1.4 Accessories

The following accessories are available for the product, which must be ordered separately:

- Straight and angled cable connectors
- Cable extensions

For information regarding which accessory articles can be used with the corresponding product variants, see catalog data sheet.

2 Basic safety notes

2.1 Intended use

Size "SA" optional modules are used to transmit electrical signals/ voltages from a machine/system to a handling device/tool.

- The product is intended for installation in a machine/ automated system. The applicable guidelines for the machine/ automated system must be observed and complied with.
- The product may only be used within the scope of its technical data, ▶ 3 [16].
- The product is intended for industrial and industry-oriented use. Its use outside enclosed spaces is only permitted if suitable protective measures are taken against outdoor exposure. The product is not suitable for use in salty air.
- Appropriate use of the product includes compliance with all instructions in this manual.
- Never disconnect or connect the module while a medium is being transferred.

Misuse

2.2 Constructional changes

Implementation of structural changes

Modifications, changes or reworking, e.g. additional threads, holes, or safety devices, can damage the product or impair its functionality or safety.

- Structural changes should only be made with the written approval of SCHUNK.

2.3 Spare parts

Use of unauthorized spare parts

Using unauthorized spare parts can endanger personnel and damage the product or cause it to malfunction.

- Use only original spare parts or spares authorized by SCHUNK.

2.4 Ambient conditions and operating conditions

Required ambient conditions and operating conditions

Incorrect ambient and operating conditions can make the product unsafe, leading to the risk of serious injuries, considerable material damage and/or a significant reduction to the product's life span.

- Make sure that the product is used only in the context of its defined application parameters, ▶ 3 [16].

2.5 Personnel qualification

Inadequate qualifications of the personnel

If the personnel working with the product is not sufficiently qualified, the result may be serious injuries and significant property damage.

- All work may only be performed by qualified personnel.
- Before working with the product, the personnel must have read and understood the complete assembly and operating manual.
- Observe the national safety regulations and rules and general safety instructions.

The following personal qualifications are necessary for the various activities related to the product:

Trained electrician

Due to their technical training, knowledge and experience, trained electricians are able to work on electrical systems, recognize and avoid possible dangers and know the relevant standards and regulations.

Qualified personnel

Due to its technical training, knowledge and experience, qualified personnel is able to perform the delegated tasks, recognize and avoid possible dangers and knows the relevant standards and regulations.

Instructed person

Instructed persons were instructed by the operator about the delegated tasks and possible dangers due to improper behaviour.

Service personnel of the manufacturer

Due to its technical training, knowledge and experience, service personnel of the manufacturer is able to perform the delegated tasks and to recognize and avoid possible dangers.

2.6 Personal protective equipment

Use of personal protective equipment

Personal protective equipment serves to protect staff against danger which may interfere with their health or safety at work.

- When working on and with the product, observe the occupational health and safety regulations and wear the required personal protective equipment.
- Observe the valid safety and accident prevention regulations.
- Wear protective gloves to guard against sharp edges and corners or rough surfaces.
- Wear heat-resistant protective gloves when handling hot surfaces.
- Wear protective gloves and safety goggles when handling hazardous substances.
- Wear close-fitting protective clothing and also wear long hair in a hairnet when dealing with moving components.

2.7 Notes on safe operation

Incorrect handling of the personnel

Incorrect handling and assembly may impair the product's safety and cause serious injuries and considerable material damage.

- Avoid any manner of working that may interfere with the function and operational safety of the product.
- Use the product as intended.
- Observe the safety notes and assembly instructions.
- Do not expose the product to any corrosive media. This does not apply to products that are designed for special environments.
- Eliminate any malfunction immediately.
- Observe the care and maintenance instructions.
- Observe the current safety, accident prevention and environmental protection regulations regarding the product's application field.

2.8 Transport

Handling during transport

Incorrect handling during transport can make the product unsafe and risk the danger of serious injuries and considerable material damage.

- During transport and handling, secure the product to prevent it from falling.
- Do not walk under suspended loads.

2.9 Malfunctions

Behavior in case of malfunctions

- Immediately remove the product from operation and report the malfunction to the responsible departments/persons.
- Order appropriately trained personnel to rectify the malfunction.
- Do not recommission the product until the malfunction has been rectified.
- Test the product after a malfunction to establish whether it still functions properly and no increased risks have arisen.

2.10 Disposal

Handling of disposal

The incorrect handling of disposal may impair the product's safety and cause serious injuries as well as considerable material and environmental harm.

- Follow local regulations on dispatching product components for recycling or proper disposal.

2.11 Fundamental dangers

General

- Observe safety distances.
- Never deactivate safety devices.
- Before commissioning the product, take appropriate protective measures to secure the danger zone.
- Disconnect power sources before installation, modification, maintenance, or calibration. Ensure that no residual energy remains in the system.
- If the energy supply is connected, do not move any parts by hand.
- Do not reach into the open mechanism or movement area of the product during operation.

2.11.1 Protection during handling and assembly

Incorrect handling and assembly

Incorrect handling and assembly may impair the product's safety and cause serious injuries and considerable material damage.

- Have all work carried out by appropriately qualified personnel.
- For all work, secure the product against accidental operation.
- Observe the relevant accident prevention rules.
- Use suitable assembly and transport equipment and take precautions to prevent jamming and crushing.

Incorrect lifting of loads

Falling loads may cause serious injuries and even death.

- Stand clear of suspended loads and do not step into their swiveling range.
- Never move loads without supervision.
- Do not leave suspended loads unattended.

2.11.2 Protection during commissioning and operation

Falling or violently ejected components

Falling and violently ejected components can cause serious injuries and even death.

- Take appropriate protective measures to secure the danger zone.
- Never step into the danger zone during operation.

2.11.3 Protection against dangerous movements

Unexpected movements

Residual energy in the system may cause serious injuries while working with the product.

- Switch off the energy supply, ensure that no residual energy remains and secure against inadvertent reactivation.
- Never rely solely on the response of the monitoring function to avert danger. Until the installed monitors become effective, it must be assumed that the drive movement is faulty, with its action being dependent on the control unit and the current operating condition of the drive. Perform maintenance work, modifications, and attachments outside the danger zone defined by the movement range.
- To avoid accidents and/or material damage, human access to the movement range of the machine must be restricted. Limit/prevent accidental access for people in this area due through technical safety measures. The protective cover and protective fence must be rigid enough to withstand the maximum possible movement energy. EMERGENCY STOP switches must be easily and quickly accessible. Before starting up the machine or automated system, check that the EMERGENCY STOP system is working. Prevent operation of the machine if this protective equipment does not function correctly.

2.11.4 Protection against electric shock

Working on electrical equipment

Touching live parts can lead to death.

- Work on electrical equipment may only be carried out by qualified electricians in accordance with electrotechnical regulations.
- Lay electrical cables properly, e.g. in a cable duct or cable bridge. Observe standards.
- Before connecting or disconnecting electrical cables: Switch off the power supply and secure it against being switched on again, check that the cables are de-energized.
- Before switching on / commissioning the product, check that the protective earth conductor is correctly attached to all electrical components in accordance with the wiring diagram.
- Check whether covers and protective devices have been fitted to prevent contact with live components.
- Do not touch the connection points of the product when the power supply is switched on.

Possible electrostatic energy

Components or assembly groups may become electrostatically charged. When the electrostatic charge is touched, the discharge may trigger a shock reaction leading to injuries.

- The operator must ensure that all components and assembly groups are included in the local potential equalisation in accordance with the applicable regulations.
- While paying attention to the actual conditions of the working environment, the potential equalisation must be implemented by a specialist electrician according to the applicable regulations.
- The effectiveness of the potential equalisation must be verified by executing regular safety measurements.

2.12 Notes on particular risks

⚠ WARNING

Risk of injury from electric shock due to contact with live parts!

- Before starting any work: Disconnect the power supply from the mains and secure against accidental switch-on.
- Work may only be performed by appropriately qualified personnel.

⚠ WARNING

Risk of burns due to touching hot surfaces!

High operating temperatures can cause components to heat up considerably. Skin contact with hot surfaces causes severe burns to the skin.

- Wear safety gloves during all work in the vicinity of hot surfaces.
- Before carrying out any work, make sure that all surfaces have cooled down to the ambient temperature.

⚠ CAUTION

Risk of injury from objects falling and being ejected!

Falling and ejected objects during operation can lead to injuries.

- Take suitable protective measures to secure the danger zone.

**⚠ CAUTION****Risk of injury from sharp edges and corners!**

Sharp edges and corners can cause cuts.

- Wear suitable protective equipment.

NOTICE**Material damage due to short circuit!**

Coupling/decoupling the tool changer when the voltage is switched on leads to a short circuit in the optional module. The product may get damaged and destroyed.

- Only couple/decouple the master and tool when they are de-energized.

3 Technical data

3.1 Name plate

- | | |
|---|---------------------|
| 1 | Product designation |
| 2 | ID |
| 3 | Serial number |
| 4 | Data matrix code |

Scan the code or serial number and enter on the web and receive additional product information: CAD data, catalog data sheets, spare parts packages, software updates etc.

For further information, visit [schunk.com/serialisierung](https://www.schunk.com/serialisierung)

A separate app may be required for scanning with a mobile phone.

3.2 Ambient conditions and operating conditions

Designation	Value
Ambient temperature [°C]	
min.	+5
max.	+60
Protection class IP in coupled state	65

More technical data is included in the catalog data sheet. Whichever is the latest version.

4 Design and description

4.1 Design

Electric optional module COS SA

- | | |
|---|---|
| 1 | COS SA-K: Master side, suitable for the master |
| 2 | Attachment to master and tool changer tool |
| 3 | COS SA-A: Adapter side, suitable for the adapter |
| 4 | Connection for cable connector |
| 5 | Connection of locking, unlocking, RTL (ready to lock) sensors |

4.2 Description

Optional module for transmission of electrical signals.

Some sizes can be equipped with a connector for connecting sensors or tool coding.

The tool coding is integrated on the adapter side in the optional module. The set code can be used to program which quick-change adapter, and therefore which tool, is connected.

A maximum of 16 different tools can be coded.

5 Assembly and settings

⚠ WARNING

Risk of injury from electric shock due to contact with live parts!

- Before starting any work: Disconnect the power supply from the mains and secure against accidental switch-on.
- Work may only be performed by appropriately qualified personnel.

NOTICE

Damage to pin block possible!

To avoid malfunctions and short circuits, the pin blocks of the electric optional module must be precisely aligned and connected to the master and tool of the change system.

- Carefully monitor the commissioning of new optional modules.
- Only decouple the master and tool when they are de-energized.

5.1 Mount the optional module

- Energy supply is switched off.
 - The master and tool are decoupled.
1. Check the mounting surfaces of the optional modules for a flush fit. Use adapter plate if necessary.
 2. Mount optional module COS SA-K to the master with two screws (1) and two cylindrical pins (2).
⇒ Tightening torque [Nm]: 18
 3. Mount optional module COS SA-A to the tool with two screws (3) and two cylindrical pins (4).
⇒ Tightening torque [Nm]: 18
 4. Ensure that the connections (7) are clean and connect the sensors (locking (L), unlocking (U), RTL (R1) and RTL (R2)).
 5. Connect the cable to the connector (5) and socket (6). **NOTICE!**
The 0 and 24 VDC supply lines must be connected to specific pins on the customer's connector! For pin assignment, see catalog data sheet
 6. Connect the cable to the connector (6).

Mount the optional module

For further information, please refer to the catalog data sheets for the optional module, ► 1.1.4 [6].

5.2 Set tool coding

NOTE

Some sizes can be equipped with tool coding. The control unit uses this coding to recognize which quick-change adapter, and therefore which tool, is in use.

- Energy supply is switched off.
 - 1. Loosen the screws (1) on COS SA-A.
 - 2. Remove the inspection window (2) and seal (3).
 - 3. Set the rotary encoder switch to the desired number using a screwdriver.
 - 4. Insert the seal (3) and secure the inspection window (2) with screws (1).
- ⇒ Tightening torque [Nm]: 0.5

Setting tool coding COS SA-A

5.3 LED display of the sensors

The sensors are each equipped with two LEDs. The green LED indicates that the sensor is supplied with power and the yellow LED indicates that the switchover has taken place.

Sensors with LEDs for locking (L), unlocking (U) and RTL (R1, R2)

Tool changer position	LED display of the sensors			
	RTL (R1)	RTL (R2)	Unlocking (U)	Locking (L)
Unlocked (master unoccupied, no tool attached)	1 ON 2 OFF	1 ON 2 OFF	1 ON 2 ON	1 ON 2 OFF
RTL (Ready to Lock) (master and tool parallel and at a distance of 1.22 mm or less from each other)	1 ON 2 ON	1 ON 2 ON	1 ON 2 ON	1 ON 2 OFF
Locked (master and tool fully locked in position)	1 ON 2 ON	1 ON 2 ON	1 ON 2 OFF	1 ON 2 ON
Tool missing (master locked, without tool attached)	1 ON 2 OFF	1 ON 2 OFF	1 ON 2 OFF	1 ON 2 OFF

Tab.: LED behavior of the sensors for common positions of the tool changer

5.4 Recommended operating sequence

The following procedure serves as a general guide for programming a robot or PLC using a tool changer and a control/signal module. This procedure is recommended for "automatic" modes that are used during normal application processes.

1. Start

The robot and master are located outside the storage rack or storage location.

Tool changer is decoupled. The locking mechanism of the tool changer can be fully retracted (unlocked state) or fully extended (missing change adapter). -> Inputs "Locked" and "Unlocked" are incorrect). The tool is located on its own in the storage rack.

- a. RTL1 and RTL2 inputs are OFF.
- b. Tool and all downstream devices are offline.

2 Ensure that the change head is unlocked.

(The master must be unlocked before inserting the tool to prevent the ball bearings from touching the bearing ring of the tool).

- a. Apply compressed air to the "unlocking" connection of the tool changer.
- b. Properly vent the "Locking" connection of the tool changer.
- c. Input "Unlocked" changes to ON and remains ON. The locking mechanism of the tool changer is fully retracted and the unlocking process is complete.

3. Robot and master move parallel to the change adapter and are at a distance of 1.5 mm from the tool.

(The module contact pins touch and the RTL sensors have detected the targets on the tool).

- a. "Input" power connections are available on the tool.
- b. Inputs RTL1 and RTL2 switch to OFF and indicate that the tool can be coupled.
- c. Establish communication with downstream devices.

4. Couple tool changer.

- a. Apply compressed air to the "Locking" connection of the tool changer.
- b. Properly vent the "unlocking" connection of the tool changer.
- c. Input "Unlocked" changes to OFF a short time later, indicating piston movement. The "Locked" input then changes to ON and remains ON. The pairing process is complete.

6 Troubleshooting

6.1 Electrical signals are not transmitted

Possible cause	Corrective action
Pin block is dirty or damaged.	Clean the pin block, ▶ 7.3 [25]
Spring contact is jammed in pin block or damaged.	Loosen spring contact. Send damaged products to SCHUNK for repair.
Cable for signal transmission damaged.	Check cables and connections for damage and replace if necessary.
Cable for integrated lock monitoring is damaged.	Send damaged products to SCHUNK for repair.
Housing of the module is damaged.	
Pins are blackened due to previous arcing/ short circuit.	

7 Maintenance

7.1 Notes

⚠ WARNING

Risk of injury from electric shock due to contact with live parts!

- Before starting any work: Disconnect the power supply from the mains and secure against accidental switch-on.
- Work may only be performed by appropriately qualified personnel.

Original spare parts

Use only original spare parts of SCHUNK when replacing spare and wear parts.

7.2 Maintenance intervals

Maintenance interval	Maintenance work
monthly	<ul style="list-style-type: none"> • Check optional module for damage and wear, clean if necessary, and replace seals, ▶ 7.3 [25]. • Check fittings for tightness and tighten to the required torque if necessary. • Check cable connections for tight fit. Clean loose connections and retighten if necessary. • Check the cable sheathing for damage and replace the cable if necessary.
as required	Send damaged products to SCHUNK for repair.

7.3 Clean optional module

NOTICE

Damage to pins and spring contacts possible!

Only use non-abrasive materials to clean the pin block, e.g. a nylon brush or a vacuum suction unit.

- Energy supply is switched off.
- 1. Check pin block (1) for deposits and blackened spring contacts.
- 2. Remove deposits with a vacuum suction unit and clean pin block with a nylon brush.
- 3. After cleaning, check pin block for damage and wedged spring contacts.
- 4. Loosen tilted spring contacts carefully by applying light pressure with a blunt tip.
- 5. In the event of damage to the pins: Send damaged products to SCHUNK for repair.

Pin-Block to adapter (...-A) and master (...-K)

7.4 Replacing V-ring seal on master

- Energy supply is switched off.
- 1. Pull the seal (1) from the pin block.
- 2. Check seal (1) for wear or damage.
- 3. Carefully pull the new seal apart with your fingers and pull it over the pin block.
- 4. Press the seal into the slot of the pin block.

Removing and inserting the seal

8 Disassembly and disposal

⚠ WARNING

Risk of injury due to unexpected movements!

If the power supply is switched on or residual energy remains in the system, components can move unexpectedly and cause serious injuries.

- Before starting any work on the product: Switch off the power supply and secure against restarting.
 - Make sure, that no residual energy remains in the system.
-
- Disconnect the entire energy supply from the product, discharge any accumulated residual energy.
 - Remove any lubricant and dispose of in an environmentally friendly manner.
 - Follow local regulations on dispatching product components for recycling or proper disposal.

9 EU-Declaration of Conformity

according to EU Directive 2014/35/EU

Manufacturer/
Distributor SCHUNK SE & Co. KG
Spanntechnik | Greiftechnik | Automatisierungstechnik
Bahnhofstr. 106 - 134

11 Information on the RoHS Directive, REACH Regulation and Substances of Very High Concern (SVHC)

RoHS Directive

SCHUNK products are classified as "large-scale stationary installations" or as "large-scale stationary industrial tools" within the meaning of Directive 2011/65/EU and its extension 2015/863/EU "on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS)", or fulfill their intended function only as part of one. Therefore products from SCHUNK do not fall within the scope of the directive at this time.

REACH Regulation

Products from SCHUNK fully comply with the regulations of Regulation (EC) No. 1907/2006 "concerning the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH)" and its amendment 2022/477. SCHUNK attaches great importance to completely avoiding chemicals of concern to humans and the environment wherever possible.

Only in rare exceptional cases do SCHUNK products contain SVHC substances on the candidate list with a mass content above 0.1%. In accordance with Article. 33 (1) of Regulation (EC) No. 1907/2006, SCHUNK complies with its duty to "communicate information on substances in articles" and lists the components concerned and the substances used in an overview that can be viewed at [schunk.com/SVHC](https://www.schunk.com/SVHC).
